

*Tom Diez works for De Watergroep, the largest water utility in the Flemish region (Belgium), where he is Director of the department Water Resources and Environment. He is a hydrogeologist with over 15 years of experience in different aspects of groundwater flow, resource management and the protection of drinking-water resources. He is also environmental coordinator and is therefore responsible for formulating, researching, and enforcing environmental policies. Since 2014, he is also responsible for the implementation of the risk assessment and risk management approach from source to tap, according to the concept of Water Safety Plans.*
